For Immediate Release

### **ROCKY MOUNTAIN CORPORATE UPDATE**

**ROCKY MOUNTAIN RESOURCES CORP.** (“Rocky Mountain”) is pleased to announce the commencement of work on the following two projects.

#### **Gibellini Project, Eureka County, Nevada**

Rocky Mountain has completed 6000 feet of reverse circulation in 17 drill holes and is currently conducting core drilling of an additional 1500 feet in four holes. The purpose of the drill program is three-fold:

- To provide material for metallurgical testing and density determinations and to define the pit boundaries at the Gibellini vanadium deposit.
- To test the thickness and grade of vanadium mineralization at the Rich vanadium deposit where trench samples indicate a second vanadium deposit of 1000 meters to the south of the main Gibellini resource.
- And to define the extents of the mineralized pipe-like breccia body at the Gibellini Manganese-Nickel mine.

#### **Lake Owen Project, Albany County, Wyoming**

The entire 18 square mile claim block now has a detailed ground magnetic survey. A 2600 soil and rock chip geochemical survey has been completed and will be compiled to test for platinum and palladium in horizons identified by ground magnetic surveys. Approximately 2500 feet of drill core collected by Chevron Resources is being split and assayed for platinum.

In addition, Rocky Mountain has launched its official website. Please visit [www.rkyresources.com](http://www.rkyresources.com) for further details.

For further information, please contact Brian McAlister, President of Rocky Mountain Resources Corp., by telephone at (604) 408-7553.
